# THOUGHT IT COULDN'T GET BETTER? *WE MADE IT LIGHTER.*

## INTRODUCING THE HONDA GX25 ENGINE

Magic Screed, now equipped with the Honda GX25 engine, delivers all the power you need for flawless screeding—while shedding unnecessary weight.

This upgrade is a strategic improvement based on years of testing, which revealed that our previous engine provided more power than necessary for our screeding needs. As a result, we chose a more efficient solution. The new, smaller engine is lighter, boosts operator comfort, reduces CO2 emissions, and enhances fuel efficiency—all without sacrificing performance.

After 40 years of R&D, we've made the perfect screed even better, and once you try it, you'll never look back.

## LESS IS MORE. >>>

### LESS EMISSIONS.

The Honda GX25 is built to meet strict emission standards. It delivers exceptional performance while minimizing your environmental impact.

### LESS WEIGHT.

As the world's lightest OHC engine, the GX25 delivers the strength and efficiency of a larger engine in a smaller, more compact package.

### LESS STRESS ON THE OPERATOR.

The new design cuts down on weight, noise, and handle vibration, drastically lowering operator stress. This means less fatigue, and improved comfort and productivity.

### LESS FUEL AND COSTS.

Built with a strong low-end torque, the GX25 runs smoothly at partial throttle, ensuring excellent fuel efficiency and reducing operational costs.
